

Take Copilot anywhere.

Copilot lives in your IDE. **Polyclaw takes it everywhere else** -- scheduling tasks, remembering context, and reaching you through any channel even after you close your editor.

- **Copilot SDK native**

Streaming, tool execution, and multi-model support built in

- **Persistent workspace**

Your agent's files, scripts, and memory survive across sessions

- **Multi-channel**

Telegram, web, terminal, phone calls via Azure Communication Services & Bot Service

- **Proactive scheduler**

Cron jobs and one-shot timers that reach out when the time comes

- **Guardrails & HILT**

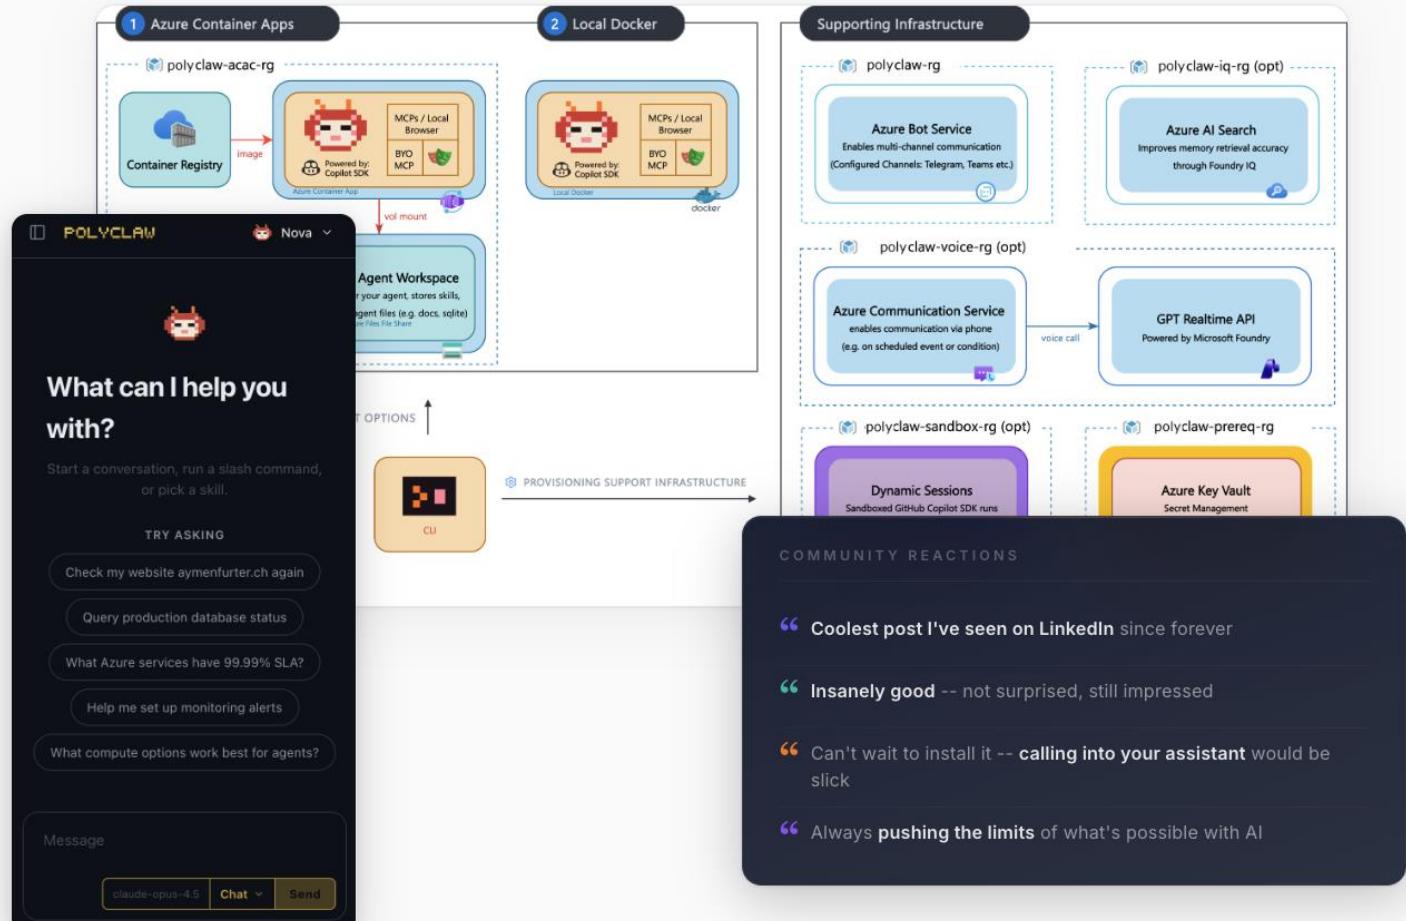

Defense-in-depth tool interception -- allow, deny, human-in-the-loop, phone-in-the-loop, AI reviewer, and Azure AI Prompt Shields with fail-closed content safety

- **Secure & observable**

Credential isolation between admin and agent runtime with least-privilege RBAC, deterministic audit trails with automated risk classification, sandboxed execution environments, and distributed tracing via OpenTelemetry

- **Extensible**

Skills, plugins, MCP servers, and self-taught abilities via a built-in marketplace

Get polyclaw.

Plans ahead. Remembers everything. Calls when it matters.

The image displays three views of the Polyclaw application:

- TERMINAL**: Shows a terminal window with a log of 500 lines. The log includes a "Chat" section where the bot responds to a user asking about build status, and a "Log" section showing bash commands being run to download and process an Azure SLA document.
- BROWSER**: Shows a browser window titled "POLYCLAW". It displays a message from the bot instructing the user to check Azure SLAs and store them in a database. Below this, a list of bash commands is shown, which correspond to the log output in the terminal.
- PHONE**: Shows a mobile phone screen with a messaging interface. The bot has sent a message to the user, and the user has responded with a message about GitHub stats. The phone screen also shows a GitHub profile for "Aymen Furter" with various metrics like 245 posts, 115 followers, and 56 following.
